#### DISPOSAL OF HOT SOLUTIONS

It has been brought to our attention by the Health-Physics Group that the draintraps on many of our sinks are becoming seriously contaminated. In view of this, it has been recommended by Dr. Cantril that all solutions containing over the order of  $10^5$  to  $10^6$  counts/minute/liter be thrown down the hot drains rather than the regular sinks.

Your cooperation in observing this on a trial basis would be appreciated. If great inconvenience results in following through this scheme, the matter can be discussed further.
